

Wish to Develop Data Driven Safety System - We can DO it for YOU

Doc. No. ADPL/Brochure/Consult. Serv/004;Rev. No.00.00;Eff. Date: 14.02.2025

Background

People and Process Safety is a major concern for any production facility. If not managed and monitored scientifically and with data driven approach it may lead to major disasters and serious legal and statutory concerns for the organisation which finally results in financial loss.

Concern

According to available data, India reports an average of 1,109 deaths and over 4,000 injuries annually in registered factories, with experts stating that the actual numbers are likely higher due to underreporting in the informal sector; this translates to roughly three workers dying every day in Indian factories due to poor safety measures.

What We can DO for YOUR Organisation

- **Analysis of Current Safety System:** Thorough study of existing safety systems, identifying gaps and providing recommendations to take the next step.
- **Proposal for Safety Management System:** Develop user friendly front end and database for managing complete safety system online.
- **Training on Safety Tools:** Safety training on field visits, observations, prioritization and elimination of high hazard observations, monitoring and follow-up.
- **Targeted Training Modules and Follow-up sessions:** We offer specialized training on top 5 risks of your organization delivered by industry experts, to ensure that employees are well-equipped to recognize and prevent risks.
