

Worried About STF Injuries - We are here to Hold Hands

Doc. No. ADPL/Brochure/Safety Sol/003; Rev. No. 00.00; Eff. Date : 12.02.2025

Background

Slip, trip and fall (STF) hazards are one of the most common risks in any environment, and shop floors are no exception. These hazards are especially dangerous in shop floors due to inherent uneven layouts and presence of different equipment.

Concern

According to the World Health Organization (WHO), falls are the second leading cause of unintentional injury deaths globally, claiming an estimated 684,000 lives annually.

Injuries from slips, trips, and falls account for more than 50% of all injuries on shop floors.

Our Hand Holding Offer to Eliminate STF

- **Analysis of Current Safety Practices:** Thorough study of existing safety practices, identifying gaps and providing recommendations to improve safety measures.
- **Proposal for Monitoring Systems:** We propose systems and devices designed to monitor STF-prone areas and employees, equipped with proactive alarms and alerts to prevent incidents.
- **Work Area Improvement Recommendations:** We provide suggestions to enhance work areas, eliminating potential STF hazards.
- **Targeted Training Modules and Follow-up sessions:** We offer specialized training on STF hazards, delivered by industry experts, to ensure that employees are well-equipped to recognize and prevent risks.
